

**Fluticasone, salmeterol (Seretide Accuhaler[®])
GlaxoSmithKline**

(No. 82/03)

Summary of Recommendation

8 December, 2003

The Scottish Medicines Consortium (SMC) has completed its assessment of the above product and advises NHS Boards and ADTCs on its use in NHS Scotland. The recommendation is summarised as follows:

Advice: following a full submission.

Salmeterol / fluticasone (Seretide Accuhaler[®]) is accepted for use within NHS Scotland for the treatment of patients with severe chronic obstructive pulmonary disease.

It is the first of two long-acting β_2 -agonist / corticosteroid combination inhaler preparations considered by SMC and licensed for the symptomatic treatment of patients with severe chronic obstructive pulmonary disease (COPD). The individual components have been available for many years and the combination product offers ease of administration and additional convenience. The combination appears to improve lung function to a greater extent than either of the individual constituents given alone. Comparative data with other combination products are limited at the present time.
